

GÜNTHER

Press release 04th February 2020

Anlagenbau Günther GmbH well positioned for the future

Important personal changes and investments create a successful start into the year 2020

The company Anlagenbau Günther in Wartenberg-Angersbach is starting the new decade with confidence. A good order situation at the start of the year, important organizational changes and successful investments into infrastructure let the GÜNTHER management look optimistically into the future.

„A major part of the future corporate strategy is the realignment of the management,“ CEO Bernhard Günther said. Felix Wohlfahrt, a long-time employee, will strengthen the management as commercial managing director in the future. The 35-year-old business administration graduate from Lauterbach has already worked in key positions during his ten years at the company, latterly as division manager in sales. „Felix Wohlfahrt is very well informed about everything that is happening in our company, is firmly connected to the region and to our company, so that a close relationship of trust has developed over the years,“ Bernhard Günther says.

In future, Bernhard Günther will strengthen his focus as managing director on the technical components of the company. This area is wide ranged at GÜNTHER, because the company offers customer solutions from one source. The mobile and stationary recycling machines are manufactured in Wartenberg. The process includes the design and production of the machines including electrical engineering to assembling and commissioning.

The Management of Anlagenbau Günther starts into the new year and beyond with a positiv view.

GÜNTHER

In addition to personnel changes, several investments were made to strengthen the location. With the expansion of the production hall, an important investment will be completed shortly. The production area was expanded by 1125 m² and the storage area by 375 m². More space ensures more efficiency for the entire logistics. The processes within the final assembly were restructured and rooms were created for technical meetings and training.

GÜNTHER keeps up with the times, looks ahead and makes necessary arrangements in time to ensure the best possible position for the future. This way, internal processes are regularly examined and, as a result, GÜNTHER starts the 2020s with young managers and new ideas. At GÜNTHER, "future" is also associated with digitization. The newly introduced ERP system supports all departments in the processing of orders and is the basement for a future in „Industry 4.0“.

„Based on these facts, we see ourselves well equipped for the future and look forward to future challenges and to continued good work with our team,“ the two managing directors Bernhard Günther and Felix Wohlfahrt said.

Anlagenbau Günther GmbH is a medium-sized company with location and production in Wartenberg-Angersbach. Overall 130 employees are involved in the production and distribution of the recycling machines - mainly screening machines and belonging equipment.
